

## Laminating Instruction Sheet Pressure Sensitive (Cold) Sheets

### Box contents

- 10 – Laminating sheets
- 1 - Non-stick foamboard Carrier Board (Sled)

### Single-sided Lamination

1. Place your print on the non-stick side of the Carrier Board (sled)
2. Peel Back 2-3" of the "peel off" liner and fold
3. Attach the laminate sheet adhesive to the sled before the print (insure the sheet will cover your entire print)
4. Holding the laminate sheet up away from the print, remove the remainder of the liner and continue to hold the film away from the print until you process the print through the laminator or are ready to apply the laminate by hand.

#### If using a laminator

5. Set the thickness of your laminator to 3/16" thick (insure the rolls are level and the laminator can pull the board through)
6. Insert the end of the Sled where the laminate is attached first and let the laminator pull the board and laminate through the laminator
7. Peel your print off the sled and trim as necessary

#### If applying by hand

5. Using your hand or a brayer, attach the laminate to your center of your print from the top to the bottom
6. Smooth the laminate from the center to the edges
7. Peel the print off the Sled and trim as necessary
