

SuperStick Mounting Pouches

Overview

Make your own pouch boards! Superstick Mounting Pouches are designed to be used with a ProSeal or any heated roll laminator. They make mounting and laminating quick, easy and affordable using a wide range of boards. Great when you need to mount a print on demand or when your customer requests a board other than foam pouch board.

Features

- Superstick adhesive
- 5 mil thick laminating film
- 4 mil thin mounting adhesive
- Works with Sintra, Gator, Foam and most graphic boards
- Unlimited positioning with heat activated adhesives

Place pouch
on board

Place print
in pouch

Insert board
into laminator

Directions

1. Insure your work area is clean. Dirt and dust can stick to any exposed adhesive and create blemishes.
2. Lay the Mounting Pouch on the board you are using to mount your image on. The thinner side of the mounting pouch (adhesive or dull side placed on the board).
3. Insert your print into the pouch.
4. If using a roll laminator, set the temperature to 200° F and your speed to 2' per minute. Set the width of the roll nip opening to correspond with the thickness of the board. Use masking tape to tack the pouch in place, preferably at the leading edge.
5. Insert your board in laminator, when completed trim if necessary.
